Verizon Wireless Community Center Antenna Site - Activation Tomorrow

The Verizon cell site antennas situated atop the south-facing wall of the Community Center will be activated tomorrow, **June 27, 2018**. This activation signals completion of the construction for this antenna site, under the Association's lease with Verizon. Verizon reports that construction on and activation of the second antenna site at the east side of Bldg D will be completed during July. Management is interested to hear from The Peloton's Verizon users about improvement in your cell service!

Giardia Alert - Community Awareness Report

Dog owners and homeowners who rent to tenants with pets, please be advised that Giardia was found in high concentration in the stool samples of two Peloton dogs today. If you own a dog it's important that you tell your vet. It's possible your dog is not yet showing symptoms (one dog without symptoms was "loaded with Giardia"), but according to one local vet, it's highly likely they all have it. It is very contagious and lives a long time on shoes, grass and any surface dogs walk and poop on. We believe that dog owners here at The Peloton are very careful with their pets' health and will act responsibly and quickly. If you are a dog owner who knows other dog owners - especially renters who may not receive this quickly - please let them know. Symptoms may (but not always) include: Lethargy, lack of usual appetite, occasional vomiting, excess grass chewing, loose stools. Please be aware and get your dogs treated as needed!
