Herbicide Application Today - 45 Minute Dry Time

The Association's landscape maintenance contractor (BrightView) will today be applying a non-selective foliar herbicide to any mulch, rock beds or pavement seams where weeds may be present on the property. Flags will be placed in areas where the application has been placed.

Please keep yourself, any children and pets off treated areas until the spray solution has dried to prevent transfer of this product onto desirable vegetation. The drying time of this product varies due to environmental conditions but allowing 30 to 45 minutes for the chemical to dry is more than adequate with the limited quantities they will be applying.

Thank you for your understanding as we work to keep the Association property looking good!
